> 产品概述 Product overview

柔性罗氏线圈电流传感器用于测量交流电流，尤其是大电流测量。由于其柔性特点，可以用来测量尺寸很大(如导体直径≥3米)或形状不规则或导体之间空间很狭窄的导体电流(例如传统钳形电流探头无法测量时，用柔性罗氏线圈电流传感器可以方便地测量)。接头有临时型和长久型，前者为插拨式，用于便携式仪器或电流的临时测量，用于电流的在线长时间测量。安装方便，无需破坏导体。

Flexible roche coil current sensor is used to measure AC current, especially high current. Because of its flexible characteristics, it can be used to measure the conductor current with large size (such as conductor diameter ≥ 3M) or irregular shape or narrow space between conductors (for example, when the traditional clamp current probe can not measure, the flexible Rogowski coil current sensor can be used to measure conveniently). The former is plug-in type, which is used for temporary measurement of portable instrument or current, and for on-line long-time measurement of current. It is easy to install without damaging the conductor.

> 产品概述 Product overview

柔性罗氏线圈电流传感器用于测量交流电流，尤其是大电流测量。由于其柔性特点，可以用来测量尺寸很大(如导体直径≥3米)或形状不规则或导体之间空间很狭窄的导体电流(例如传统钳形电流探头无法测量时，用柔性罗氏线圈电流传感器可以方便地测量)。接头有临时型和长久型，前者为插拨式，用于便携式仪器或电流的临时测量，用于电流的在线长时间测量。安装方便，无需破坏导体。可带穿刺取电装置，温度传感器装置。适用各种型号母排安装。

Flexible roche coil current sensor is used to measure AC current, especially high current. Because of its flexible characteristics, it can be used to measure the conductor current with large size (such as conductor diameter ≥ 3M) or irregular shape or narrow space between conductors (for example, when the traditional clamp current probe can not measure, the flexible Rogowski coil current sensor can be used to measure conveniently). The former is plug-in type, which is used for temporary measurement of portable instrument or current, and for on-line long-time measurement of current. It is easy to install without damaging the conductor. It can be equipped with puncture device, temperature sensor device. Suitable for all kinds of busbar installation.
